	Preface/Acknowledgements	7	2.5.8	Fire resistance	36
1	Introduction	9	2.6	Strength	36
1.1	General	9	2.6.1	Binding force	36
1.2	History	9	2.6.2	Compressive strength	36
1.3	What one should know about earth as a building material	12	2.6.3	Tensile strength	37
1.4	Improving the indoor climate	15	2.6.4	Bending tensile strength	37
1.4.1	General	15	2.6.5	Bond strength	38
1.4.2	Air humidity and health	15	2.6.6	Resistance to abrasion	38
1.4.3	Influence of air exchange on air humidity	15	2.6.7	Modulus of elasticity	38
1.4.4	The humidity balancing effect of loam	16	2.7	pH-value	38
1.5	Prejudices against earth as building material	17	2.8	Radioactivity	38
2	Properties of earth as a building material	19	3	Preparation of loam	39
2.1	Composition	19	3.1	General	39
2.1.1	General	19	3.2	Soaking, crushing and mixing	40
2.1.2	Clay	19	3.3	Sieving	42
2.1.3	Silt, sand and gravel	20	3.4	Mechanical slurring	42
2.1.4	Grain size distribution	20	3.5	Curing (<i>Mauken</i>)	42
2.1.5	Organic constituents	20	3.6	Thinning	42
2.1.6	Water	20	4	Improving earth's characteristics by special treatment or additives	43
2.1.7	Porosity	20	4.1	General	43
2.1.8	Specific surface	20	4.2	Reduction of shrinkage cracks	43
2.1.9	Density	20	4.2.1	General	43
2.1.10	Compactability	20	4.2.2	Thinning	43
2.2	Tests to analyse the composition of loam	21	4.2.3	Thinning mediums	44
2.2.1	General	21	4.2.4	Addition of fibres	44
2.2.2	Combined sieving and sedimentation analysis	21	4.2.5	Structural measures	44
2.2.3	Water content	21	4.3	Stabilisation against water erosion	44
2.2.4	Simple field tests	21	4.3.1	General	44
2.3	Effect of water	25	4.3.2	Mineral stabilisers (binders)	45
2.3.1	General	25	4.3.3	Animal products	45
2.3.2	Swelling and shrinking	25	4.3.4	Mineral and animal products	45
2.3.3	Determination of linear shrinkage	25	4.3.5	Plant products	46
2.3.4	Plasticity	26	4.3.6	Artificial stabilisers	46
2.3.5	Capillary action	27	4.4	Enhancement of binding force	46
2.3.6	Stability in static water	29	4.4.1	General	46
2.3.7	Resistance to running water	29	4.4.2	Mixing and <i>mauken</i>	46
2.3.8	Rain and frost erosion	30	4.4.3	Increasing of clay content	46
2.3.9	Drying period	30	4.4.4	Additives	46
2.4	Effect of vapour	32	4.5	Increasing of compressive strength	47
2.4.1	General	32	4.5.1	General	47
2.4.2	Vapour diffusion	32	4.5.2	Optimum grain size distribution	47
2.4.3	Equilibrium moisture content	32	4.5.3	Preparation	47
2.4.4	Condensation	33	4.5.4	Compaction	48
2.5	Influence of heat	34	4.5.5	Mineral additives	49
2.5.1	General	34	4.5.6	Organic additives	52
2.5.2	Thermal conductivity	34	4.5.7	Addition of fibres	52
2.5.3	Specific heat	34	4.6	Strength against abrasion	52
2.5.4	Thermal capacity	34	4.7	Increasing of thermal insulation	53
2.5.5	Heat intake and release	35	4.7.1	General	53
2.5.6	Decrement factor and time lag	35	4.7.2	Lightweight straw loam	53
2.5.7	Thermal expansion	36	4.7.3	Lightweight mineral loam	54

4.7.4	Lightweight cork loam	55	9.6	Infill with <i>stranglehm</i> and earth-filled hoses	98
4.7.5	Lightweight wood loam	55			
4.7.6	Foamed loam	55	10	Tamped, poured or pumped lightweight loam	99
5	Rammed earth work	56	10.1	General	99
5.1	General	56	10.2	Formwork	99
5.2	Formwork	57	10.3	Tamped lightweight straw loam walls	99
5.3	Tools	58	10.4	Tamped lightweight wood loam walls	100
5.4	Method of construction	61	10.5	Tamped, poured or pumped lightweight mineral loam walls	101
5.5	Shaping of openings	61	10.5.1	General	101
5.6	New wall construction techniques	61	10.5.2	Tamped walls	101
5.6.1	Rammed earth panels	61	10.5.3	Poured walls	101
5.6.2	Highly mechanised techniques	63	10.5.4	Pumped walls	103
5.6.3	Frame structure with rammed earth infill	64	10.5.5	Surface treatment	103
5.6.4	Wall construction with lost formwork	64	10.6	Pumped lightweight mineral loam floors	106
5.7	Rammed earth dome	66	10.7	Loam-filled hollow blocks	106
5.8	Drying	67	10.8	Loam-filled hoses	106
5.9	Labour input	67			
5.10	Thermal insulation	67	11	Loam plasters	109
5.11	Surface treatment	67	11.1	General	109
6	Earthblock work	68	11.2	Preparation of ground	109
6.1	General	68	11.3	Composition of loam plaster	109
6.2	History	68	11.3.1	General	109
6.3	Production of earth blocks	69	11.3.2	Exposed exterior loam plasters	110
6.4	Material composition	72	11.3.3	Interior loam plasters	110
6.5	Laying of earth blocks	73	11.4	Guidelines for plastering earth walls	111
6.6	Surface treatment	74	11.5	Sprayed plaster	111
6.7	Fixing fasteners into the wall	75	11.6	Lightweight mineral loam plaster	111
7	Large blocks and prefabricated panels	76	11.7	Thrown plaster	112
7.1	General	76	11.8	Plastered straw bale houses	112
7.2	Large blocks	76	11.9	Wet formed plaster	112
7.3	Prefabricated wall panels	78	11.10	Protection of corners	112
7.4	Floor slabs	79	12	Weather protection of loam surfaces	113
7.5	Vault and dome panels	80	12.1	General	113
7.6	Loam shingles	81	12.2	Consolidating the surface	113
7.7	Floor tiles	81	12.3	Paints	113
8	Direct forming with wet loam	82	12.3.1	General	113
8.1	General	82	12.3.2	Preparation of ground	113
8.2	Traditional wet loam techniques	83	12.3.3	Recommended paint mixtures	113
8.3	<i>Dünner-Lehmbrote</i> technique	85	12.3.4	Vapour diffusion	115
8.4	<i>Stranglehm</i> technique	86	12.3.5	Water penetration	115
8.4.1	General	86	12.4	Making surfaces water repellent	115
8.4.2	Production of <i>stranglehm</i> elements	88	12.4.1	Water repellents	115
8.4.3	Preparing the mix	88	12.4.2	Application of water repellents	116
8.4.4	Laying the elements	89	12.4.3	Testing	116
8.4.5	Wall types	91	12.5	Lime plasters	116
8.4.6	Domes	94	12.5.1	General	116
9	Wet loam infill in skeleton structures	95	12.5.2	Preparation of ground	117
9.1	General	95	12.5.3	Reinforcement	117
9.2	Thrown loam	95	12.5.4	Composition	117
9.3	Sprayed loam	95	12.5.5	Application	118
9.4	Rolls and bottles of straw loam	96	12.5.6	Effect on vapour diffusion	118
9.5	Lightweight loam infill	98	12.6	Shingles, planks and other covers	118
			12.7	Structural methods	120
			12.7.1	Protection from rain	120
			12.7.2	Protection against rising damp	120

12.7.3	Protection against flooding	120	14.11.1	Wood saving stoves	154
13	Repair of loam components	121	14.11.2	Oven with integrated heated bed	155
13.1	General	121	14.11.3	Pizza oven	155
13.2	The occurrence of damage in loam components	121	14.12	Sealing ponds with loam	156
13.3	Repair of cracks and joints with loam fillers	121	14.12.1	General	156
13.3.1	General	121	14.12.2	Rammed earth	156
13.3.2	Mixtures	121	14.12.3	Green bricks	156
13.3.3	Application of filler	121	14.12.4	Extruded loam elements	156
13.4	Repair of cracks and joints with other fillers	121	14.12.5	Fleece	156
13.4.1	General	121	14.13	Earthquake resistant buildings	157
13.4.2	Mixtures	121	14.13.1	General	157
13.5	Repair of larger areas of damage	122	14.13.2	Structural measures	157
13.5.1	Repairing with loam	122	14.13.3	Shape of plan	158
13.5.2	Coatings	122	14.13.4	Bamboo reinforced rammed earth walls	160
13.6	Retrofitting thermal insulation with lightweight loam	122	14.13.5	Textile walls with loam infill	163
13.6.1	General	122	15	Examples of modern earth architecture	165
13.6.2	Condensation	122	15.1	General	165
13.6.3	Thermal insulation	123	15.2	Residence, Hörnerkirchen, Germany	165
13.6.4	Lightweight loam layers	123	15.3	Residence and studio apartment, Siegen, Germany	167
13.6.5	Prefabricated elements	123	15.4	Two semi-detached houses, Kassel, Germany	169
14	Designs of particular building elements	124	15.5	Residence cum office, Kassel, Germany	173
14.1	Joints	124	15.6	Residence, Korbeek-Lo, Belgium	175
14.2	Particular wall designs	126	15.7	Low-cost housing project, Mount Abu, Rajasthan, India	177
14.2.1	Loam walls with high thermal insulation	126	15.8	Residence at Albuquerque, USA	179
14.2.2	Loam-filled tyre walls	126	15.9	Farmhouse at Wazirpur, India	180
14.3	Intermediate floors	126	15.10	Condominium at Bern-Felsenau, Switzerland	183
14.3.1	Traditional loam floors	126	15.11	Kindergarden, Sorsum, Germany	184
14.3.2	Modern loam floors	128	15.12	Office building, New Delhi, India	187
14.4	Rammed earth floorings	128	15.13	School at Tan-Tan Plage, Morocco	189
14.4.1	General	128	15.14	Panafrican Institute for Development, Ouagadougou, Burkina Faso (Upper Volta) ...	190
14.4.2	Traditional earth floorings	128	15.15	Education centre, Seguo, Mali	193
14.4.3	Modern earth floorings	129	15.16	Solvig School, Järna, Sweden	195
14.5	Inclined roofs filled with lightweight loam	132	15.17	Students' residence, Kassel, Germany	196
14.6	Earth covered roofs	132	15.18	National Museum of Mali, Bakomo, Mali	198
14.6.1	General	132	15.19	Church at Järna, Sweden	199
14.6.2	Traditional roofs	132	15.20	Health Centre, Vöhl, Germany	200
14.6.3	New solutions	133	16	Future Prospects	202
14.7	Earth block vaults and domes	134	17	Bibliography	203
14.7.1	General	134	18	Source of photographs	205
14.7.2	Geometry	135	19	Index	206
14.7.3	Structural behaviour	136			
14.7.4	Nubian vaults	140			
14.7.5	Afghan and Persian domes	143			
14.7.6	Nubian domes	144			
14.7.7	Structurally optimised domes	145			
14.7.8	Domes and vaults on formwork	147			
14.7.9	Firing of earthen domes	147			
14.7.10	Modern examples	148			
14.8	Earthen storage wall in a wintergarden	151			
14.9	Loam in bathrooms	151			
14.10	Built-in furniture and sanitary objects from loam	151			
14.11	Loam stoves	154
