

TABLE OF CONTENTS

This book is intended for two very different types of people — technical folks (engineers, building officials, architects) and normal folks (primarily homeowners). This means that some of the information is going to be very useful to some of you and not so useful to the rest of you. Without sacrificing clarity or thoroughness, every effort has been made to juggle the information needs of both sets of people.

Preface	xix
Introduction	1
Who Would Want To Read This Book, and Why?	5
Earth and Straw: Natural Companions	7
What We Will and Will Not Talk About	8
A Footnote About Bamboo . . .	12
Part One: BASICS	15
Abbreviations and Acronyms	18
Glossary	19
Structures and Forces	33
Physical Forces That Act On Structures	33
Some Other Variables	39
Foundations	41
Gravity Loads	42
Lateral Loads	42
In-plane Forces	44
Out-of-plane Forces	45
Earthquake Loads	47
Other Lateral Force Systems	49

Part Two: EARTH	51
The Material	52
Stabilized Earth	52
Rammed Earth	55
Gunearth	55
Stabilized Earth Mix Design — A Case Study	57
density and chemistry tests	59
compressive strength tests	59
moisture exposure tests	59
bond strength tests	60
fastener tests	60
admixture tests	61
absorptivity tests	62
erosion and wear resistance tests	62
Analysis	63
Design in Non-seismic Areas	63
Design in Seismic Areas	64
Foundations	65
Bond Beams	65
Lateral Loads	66
Analysis Method	67
Design and Construction Considerations	68
Stabilized Earth	68
Rammed Earth	69
Gunearth	71
Sample Calculations	72
Case 1: Seismic zone 2B	73
check h/t ratio	73
axial compressive stress at top of footing	73
Case 2: Seismic zone 4, wall cantilevered	73
check h/t ratio	73
horizontal earthquake load	73
compressive bending stress	74
shear stress	75
tensile bending stress in reinforcing	75

Case 3: Seismic zone 4, same wall restrained at top	75
horizontal earthquake load	75
design f_c	75
compressive bending stress	76
shear stress	76
tensile bending stress in reinforcing	76
wall connection at top	76
Conclusions	76
Appendix E-1: Soil References	78
Appendix E-2: Soil-cement References	79
Appendix E-3: Sample Specification	81
Part Three: STRAW	93
The Material	95
Straw	95
Bales	96
Bale Variables	97
Bale Wall Types	99
Test Results — Straw Bale and Wall Properties	100
Bou-Ali tests, Tucson, Arizona	100
SHB AGRA tests, Albuquerque, New Mexico	102
Ship Harbour Project tests, Nova Scotia	102
Fibrehouse Limited tests, Ottawa, Ontario	103
Analysis	104
Load-bearing Straw-bale Walls	104
Gravity (Vertical) Loading	110
Lateral Loading: Wind	113
Lateral Loading: Earthquake	114
Non-load-bearing Straw-bale Walls	115
Design and Construction Considerations	117
Bales and Pinning	119
Wall Settling	121
Moisture	124
Fire	126

Sample Calculations	126
Case 1: Load-bearing Walls	127
design for bale bearing and precompression	127
check plaster skin in compression	128
design for out-of-plane shear	128
design for in-plane shear	128
Case 2: Non-load-bearing Walls	130
design for bale bearing and precompression	130
design for out-of-plane shear	130
design for in-plane shear	130
Conclusions	130
Appendix S-1: Straw Panels	135
Pyramod International, Inc., City of Industry, California	136
Stramit, U.S.A. L.L.C., Perryton, Texas	137
thermal transmission (ASTM C-518)	138
nail pull (C-473)	138
racking load (ASTM E-72)	138
static pressure (ASTM E-330)	138
impact loading (ASTM E-695)	138
BioFab, Redding, California	139
Meadowood, Albany, Oregon	139
thermal transmission	139
nail pull	139
modulus of elasticity	140
modulus of rupture	140
tensile strength	140
Conclusions	140
Appendix S-2: California Straw-bale Code	142

References	153
