

RS	Radar Satellite Observations over Mountainous Regions and Tundra	1
RS	Remote Sensing of the Arctic: A Review of the Satellite Observations and Applications	2
RS	Remote Sensing and Monitoring Environmental Changes in Mountainous Regions	3
RS	Global Monitoring of the Environment Using Remote Sensing Techniques	4
OS	Observation of the Environment Using Remote Sensing Techniques	5
IE	Introduction to the Use of Remote Sensing for Environmental Monitoring	6
IE	Environmental Monitoring Using Remote Sensing Techniques	7
SE	Satellite Earth Observation: From Sensors to Applications	8
Chapter 1. The Odyssey of Remote Sensing from Space: Half a Century of Satellites for Earth Observations	9	
Introduction	10	
1.1. To improve the weather forecasts	11	
1.2. Technological challenges to spy and to map from orbit	12	
1.3. Toward global environmental observers in space	13	
1.4. The digital revolution of the ICTs for GIS applications	14	
1.5. Suggested reading	15	
Chapter 2. Territorial and Urban Measurements	16	
Marius PAULESCU and Viorel BADESCU	17	
2.1. Solar radiation at the Earth's surface	18	
2.2. Instrumentation	20	
2.2.1. Fundamentals of solar irradiance measurements	21	
2.2.2. Solar radiometers	22	
2.2.2.1. Pyrheliometers	23	
2.2.2.2. Pyranometers	24	
2.2.2.3. World radiometric reference	25	
2.2.2.4. Radiometers calibration and uncertainty	26	
2.2.2.5. Classification of pyranometers	27	
2.2.3. Sunshine duration measurements	28	
2.2.3.1. Burning card method	29	
2.2.3.2. Pyranometric method	30	

## Table of Contents

<b>Introduction</b>	xiii
<b>The Authors</b>	xvi
<b>Chapter 1. The Odyssey of Remote Sensing from Space: Half a Century of Satellites for Earth Observations</b>	1
Théo PIRARD	
1.1. To improve the weather forecasts	2
1.2. Technological challenges to spy and to map from orbit	3
1.3. Toward global environmental observers in space	6
1.4. The digital revolution of the ICTs for GIS applications	9
1.5. Suggested reading	12
<b>Chapter 2. Territorial and Urban Measurements</b>	13
Marius PAULESCU and Viorel BADESCU	
2.1. Solar radiation at the Earth's surface	13
2.2. Instrumentation	17
2.2.1. Fundamentals of solar irradiance measurements	18
2.2.2. Solar radiometers	20
2.2.2.1. Pyrheliometers	20
2.2.2.2. Pyranometers	20
2.2.2.3. World radiometric reference	23
2.2.2.4. Radiometers calibration and uncertainty	23
2.2.2.5. Classification of pyranometers	25
2.2.3. Sunshine duration measurements	25
2.2.3.1. Burning card method	25
2.2.3.2. Pyranometric method	27

2.2.4. Data quality assessment . . . . .	28	4.6.1. High . . . . .
2.2.5. Data availability . . . . .	29	4.6.1.1. . . . .
2.3. Radiation measurements in urban environment . . . . .	29	4.6.1.2. . . . .
2.3.1. Description scales . . . . .	29	4.6.1.3. . . . .
2.3.2. Urban site description . . . . .	30	4.6.1.4. . . . .
2.3.3. WMO recommendations . . . . .	31	4.6.2. Solar . . . . .
2.3.3.1. Scope of measurements and measurement site selection . . . . .	31	4.7. Bibliog . . . . .
2.3.3.2. Measurements and corrections . . . . .	32	
2.4. Conclusions . . . . .	33	
2.5. Acknowledgments . . . . .	33	
2.6. Bibliography . . . . .	33	
<b>Chapter 3. Sky Luminance Models . . . . .</b>	<b>37</b>	
Matej KOBAV and Grega BIZJAK		
3.1. CIE standard overcast sky (1955) . . . . .	39	5.1. Global . . . . .
3.2. CIE standard clear sky (1996) . . . . .	39	5.2. The dis . . . . .
3.3. CIE standard general sky . . . . .	40	5.2.1. Cor . . . . .
3.4. All-weather model for sky luminance distribution – Perez . . . . .	45	5.2.2. Eff . . . . .
3.5. ASRC–CIE model . . . . .	48	5.2.3. Infl . . . . .
3.6. Igawa all-sky model . . . . .	49	5.3. The Sun . . . . .
3.7. Absolute luminance . . . . .	52	5.4. The sol . . . . .
3.8. Visualization . . . . .	54	5.5. Climate . . . . .
3.9. Conclusion . . . . .	54	5.6. Solar en . . . . .
3.10. Bibliography . . . . .	55	5.7. Conclus . . . . .
<b>Chapter 4. Satellite Images Applied to Surface Solar Radiation Estimation . . . . .</b>	<b>57</b>	5.8. Bibliog . . . . .
Bella ESPINAR and Philippe BLANC		
4.1. The solar resource . . . . .	57	
4.2. Ground measurements of the solar resource . . . . .	60	6.1. Introdu . . . . .
4.2.1. Ground instruments . . . . .	60	6.2. Soil–ve . . . . .
4.2.2. The spatial variability of solar radiation . . . . .	62	6.3. Physiog . . . . .
4.3. Satellite images for SSI estimation . . . . .	64	6.4. Solar ra . . . . .
4.4. Two different approaches for satellite-based SSI estimation . . . . .	68	6.5. Infrared . . . . .
4.4.1. SSI clear-sky models . . . . .	68	6.6. Other h . . . . .
4.4.2. The inverse approach . . . . .	69	6.7. Conclus . . . . .
4.4.2.1. The calculation of the cloud coverage index . . . . .	69	6.8. Bibliog . . . . .
4.4.2.2. The calculation of the GHI . . . . .	70	
4.4.3. The direct approach . . . . .	72	
4.5. Accuracy of satellite-based SSI estimations . . . . .	74	
4.6. Use of satellite observations for high-resolution solar radiation estimation . . . . .	78	
<b>Chapter 5. Weather and Climate . . . . .</b>	<b>81</b>	
Benoit BECKER		
5.1. Global . . . . .	81	7.1. Physica . . . . .
5.2. The dis . . . . .	81	7.2. Related . . . . .
5.2.1. Cor . . . . .	81	7.2.1. Bar . . . . .
5.2.2. Eff . . . . .	81	7.2.2. Gra . . . . .
5.2.3. Infl . . . . .	81	7.2.3. Gre . . . . .
5.3. The Sun . . . . .	81	7.2.4. Gre . . . . .
5.4. The sol . . . . .	81	
5.5. Climate . . . . .	81	
5.6. Solar en . . . . .	81	
5.7. Conclus . . . . .	81	
5.8. Bibliog . . . . .	81	
<b>Chapter 6. Local . . . . .</b>	<b>85</b>	
Pierre KASTEND		
6.1. Introdu . . . . .	85	
6.2. Soil–ve . . . . .	85	
6.3. Physiog . . . . .	85	
6.4. Solar ra . . . . .	85	
6.5. Infrared . . . . .	85	
6.6. Other h . . . . .	85	
6.7. Conclus . . . . .	85	
6.8. Bibliog . . . . .	85	
<b>Chapter 7. Evaluation . . . . .</b>	<b>89</b>	
Marjorie MUSY		
7.1. Physica . . . . .	89	
7.2. Related . . . . .	89	
7.2.1. Bar . . . . .	89	
7.2.2. Gra . . . . .	89	
7.2.3. Gre . . . . .	89	
7.2.4. Gre . . . . .	89	

4.6.1. High-resolution solar atlas of Provence-Alpes-Côte d'Azur . . . . .	79
4.6.1.1. Model for the variation of the optical path length . . . . .	80
4.6.1.2. Model for sky obstruction effects by the orography . . . . .	81
4.6.1.3. Uncertainty analysis of the solar atlas . . . . .	85
4.6.1.4. Dissemination of the solar atlas . . . . .	86
4.6.2. Solar resource assessment at urban scale . . . . .	87
4.7. Bibliography . . . . .	92
<b>Chapter 5. Worldwide Aspects of Solar Radiation Impact . . . . .</b>	99
Benoit BECKERS	
5.1. Global energy budget at the Earth level . . . . .	99
5.2. The distribution of solar radiation on the Earth's surface . . . . .	102
5.2.1. Consequence of the unequal distribution of sunshine . . . . .	103
5.2.2. Effect of the Earth's rotation . . . . .	104
5.2.3. Influence of continental masses . . . . .	106
5.3. The Sun at different latitudes . . . . .	107
5.4. The solar diagrams . . . . .	108
5.5. Climate and housing . . . . .	111
5.6. Solar energy at urban scale . . . . .	113
5.7. Conclusions and perspectives . . . . .	115
5.8. Bibliography . . . . .	117
<b>Chapter 6. Local Energy Balance . . . . .</b>	119
Pierre KASTENDEUCH	
6.1. Introduction . . . . .	119
6.2. Soil–vegetation–atmosphere transfer model . . . . .	120
6.3. Physiographic data and boundary conditions . . . . .	121
6.4. Solar radiation transfers . . . . .	123
6.5. Infrared radiation transfers . . . . .	129
6.6. Other heat fluxes . . . . .	131
6.7. Conclusions . . . . .	134
6.8. Bibliography . . . . .	135
<b>Chapter 7. Evapotranspiration . . . . .</b>	139
Marjorie MUSY	
7.1. Physical bases . . . . .	140
7.2. Related interest of different types of evapotranspirating surfaces . . . . .	142
7.2.1. Bare soil . . . . .	142
7.2.2. Grass-covered areas . . . . .	143
7.2.3. Green roofs . . . . .	144
7.2.4. Green walls . . . . .	144

7.2.5. Trees . . . . .	146	9.2. Forward . . . . .	9.2.1. Plan . . . . .
7.2.6. Parks . . . . .	148		9.2.2. Build . . . . .
7.3. From microscale to city scale: the modeling approaches . . . . .	149		9.2.3. Structure . . . . .
7.3.1. Microscale . . . . .	149	9.3. Inverse . . . . .	9.3.1. Invert . . . . .
7.3.2. District scale . . . . .	152		9.3.2. Invert . . . . .
7.3.3. City scale . . . . .	153	9.4. Simulation . . . . .	9.4. Examples . . . . .
7.4. Conclusions . . . . .	154	9.5. Examples . . . . .	
7.5. Bibliography . . . . .	154	9.6. Bibliography . . . . .	
<b>Chapter 8. Multiscale Daylight Modeling for Urban Environments . . . . .</b>	<b>159</b>	<b>Chapter 10. Radiative Transfer Modeling for Urban Environments . . . . .</b>	<b>Pierre BECKERS</b>
John MARDALJEVIC and George M. JANES			
8.1. Introduction . . . . .	159	10.1. Introduction . . . . .	10.1.1. Radiative transfer modeling . . . . .
8.2. Background . . . . .	160	10.2. Geometrical models . . . . .	10.2.1. The city . . . . .
8.2.1. Climate and microclimate . . . . .	160		10.2.2. Spherical harmonics . . . . .
8.2.2. The urban solar microclimate . . . . .	161		10.2.2.1. Legendre polynomials . . . . .
8.2.3. The USM and human experience . . . . .	162		10.2.2.2. Zernike polynomials . . . . .
8.2.4. The USM in guidelines and recommendations . . . . .	163		10.2.2.3. Zernike polynomials . . . . .
8.2.5. "Real" climate . . . . .	164		10.2.3. Generalized spherical harmonics . . . . .
8.2.6. Climate-based daylight modeling . . . . .	165		10.2.3.1. Legendre polynomials . . . . .
8.3. Visualizing the urban solar microclimate . . . . .	167		10.2.3.2. Zernike polynomials . . . . .
8.3.1. The San Francisco 3D model . . . . .	167		10.3. Loading . . . . .
8.3.2. Harvesting solar energy . . . . .	169		10.3.1. Radiative transfer modeling . . . . .
8.3.3. A strategic evaluation of urban solar potential . . . . .	170		10.3.2. Irradiation mapping . . . . .
8.3.4. Irradiation mapping of "virtual London" . . . . .	172		10.3.2.1. Irradiation mapping . . . . .
8.4. The ASL building: a solar access study . . . . .	173		10.3.2.2. Irradiation mapping . . . . .
8.4.1. Density and zoning in New York City . . . . .	173		10.3.2.3. Irradiation mapping . . . . .
8.4.2. The Art Students League building . . . . .	174		10.4. Computing . . . . .
8.4.3. Quantifying the potential daylight injury . . . . .	175		10.4.1. Radiative transfer modeling . . . . .
8.4.4. Outcomes and implications . . . . .	178		10.4.2. Visualization . . . . .
8.5. Daylighting the New York Times building . . . . .	180		10.4.2.1. Visualization . . . . .
8.5.1. 3D model for NYT building and surroundings . . . . .	181		10.4.2.2. Visualization . . . . .
8.5.2. The spatiotemporal dynamics of sunlight exposure . . . . .	182		10.4.2.3. Visualization . . . . .
8.5.3. Balancing daylight provision and visual comfort . . . . .	183		10.4.3. Discussion . . . . .
8.6. Summary . . . . .	187		10.4.4. Conclusion . . . . .
8.7. Acknowledgments . . . . .	187		10.5. Transition . . . . .
8.8. Bibliography . . . . .	187		10.6. Conclusion . . . . .
<b>Chapter 9. Geometrical Models of the City . . . . .</b>	<b>191</b>		10.7. Bibliography . . . . .
Daniel G. ALIAGA			
9.1. Introduction . . . . .	191		
9.1.1. Modeling challenges . . . . .	192		
9.1.2. State-of-the-art . . . . .	193		

9.2. Forward procedural modeling . . . . .	194
9.2.1. Plants and architecture . . . . .	194
9.2.2. Buildings and cities . . . . .	194
9.2.3. Streets and parcels . . . . .	195
9.3. Inverse procedural modeling . . . . .	196
9.3.1. Inverse parameter estimation . . . . .	197
9.3.2. Inverse procedure and parameter estimation . . . . .	198
9.4. Simulation-based modeling . . . . .	199
9.5. Example systems . . . . .	200
9.6. Bibliography . . . . .	200
<b>Chapter 10. Radiative Simulation Methods . . . . .</b>	<b>205</b>
Pierre BECKERS and Benoit BECKERS	
10.1. Introduction . . . . .	205
10.2. Geometry . . . . .	206
10.2.1. The geometric model . . . . .	206
10.2.2. Solar geometry: calculating the Sun's position . . . . .	207
10.2.2.1. Earth's revolution . . . . .	209
10.2.2.2. Earth's rotation . . . . .	211
10.2.2.3. Sun's azimuth and zenith angle . . . . .	212
10.2.3. Geometric description of the environment of a point . . . . .	213
10.2.3.1. Contribution of cartography . . . . .	213
10.2.3.2. Urban geometry, stereography, and isochronous graph . . . . .	216
10.3. Loading . . . . .	218
10.3.1. Radiation sources: Sun and sky . . . . .	218
10.3.2. Irradiance on differently oriented planes . . . . .	219
10.3.2.1. Direct radiation on a plane always facing the Sun . . . . .	219
10.3.2.2. Horizontal plane . . . . .	221
10.3.2.3. Computation of energy . . . . .	222
10.4. Computation model . . . . .	223
10.4.1. Radiosity equations . . . . .	224
10.4.2. View factors . . . . .	225
10.4.2.1. Properties of the view factor . . . . .	225
10.4.2.2. View factors algebra . . . . .	228
10.4.2.3. Point to area view factor . . . . .	228
10.4.3. Digital processing of the view factor . . . . .	230
10.4.4. Characteristics of the discrete model: the mesh and its control . . . . .	231
10.5. Transient thermal coupled problem . . . . .	232
10.6. Conclusion . . . . .	234
10.7. Bibliography . . . . .	234

<b>Chapter 11. Radiation Modeling Using the Finite Element Method . . . . .</b>	237
Tom van EKELEN	
11.1. Basic assumptions . . . . .	237
11.2. Visibility and view factors . . . . .	239
11.2.1. Definition . . . . .	239
11.2.2. Monte Carlo-based ray-tracing method . . . . .	241
11.3. Thermal balance equations . . . . .	245
11.3.1. Conductive thermal balance . . . . .	245
11.3.2. Radiation thermal balance . . . . .	246
11.3.2.1. Gray approximation . . . . .	249
11.3.2.2. Non-gray (multiband) solution . . . . .	249
11.4. Finite element formulation . . . . .	250
11.5. Example problems . . . . .	254
11.6. Bibliography . . . . .	257
<b>Chapter 12. Dense Cities in the Tropical Zone . . . . .</b>	259
Edward NG	
12.1. Introduction . . . . .	259
12.2. Access to the sky . . . . .	261
12.3. Designing for daylight . . . . .	266
12.4. Designing for solar access . . . . .	272
12.5. Designing with solar renewable energy . . . . .	281
12.6. Conclusion . . . . .	287
12.7. Bibliography . . . . .	288
<b>Chapter 13. Dense Cities in Temperate Climates: Solar and Daylight Rights . . . . .</b>	291
Guedi CAPELUTO	
13.1. Introduction . . . . .	291
13.1.1. Urban form and thermal comfort . . . . .	291
13.2. Solar rights in urban design . . . . .	292
13.3. Solar envelopes as a design tool . . . . .	293
13.4. Solar envelopes as a tool for urban development . . . . .	295
13.5. Regulations and applications . . . . .	297
13.6. Methods of application . . . . .	299
13.7. A simple design tool . . . . .	300
13.8. Modeling the building shape for self-shading using the solar collection envelope . . . . .	302
13.9. Daylight rights . . . . .	306
13.10. Daylight access . . . . .	306
13.11. Conclusions . . . . .	308
13.12. Bibliography . . . . .	309

## Chapter 14. Solar Energy at Urban Scale

Frédéric MONEA  
 14.1. Method . . . . .  
 14.2. Definitions . . . . .  
 14.3. Estimation . . . . .  
 14.4. Estimation . . . . .  
 14.5. Results . . . . .  
 14.6. Perspectives . . . . .  
 14.7. Acknowledgments . . . . .  
 14.8. Bibliography . . . . .

## Conclusion . . . . .

Benoit BECKER

## APPENDICES . . . . .

**Appendix 1. Technical Data for Earth Observation Satellites**  
 Théo PIRARD

**Appendix 2. Characteristics of Earth Observation Satellites (as of 2015)**  
 Théo PIRARD

**Appendix 3. Earth Observation Satellites**  
 Benoit BECKER

## List of Authors . . . . .

## Index . . . . .

<b>Chapter 14. Solar Potential and Solar Impact . . . . .</b>	311
Frédéric MONETTE and Benoit BECKERS	
14.1. Methodological considerations . . . . .	312
14.2. Definition of the residential area. . . . .	312
14.3. Estimation of irradiance and solar gains . . . . .	319
14.4. Estimation of energy needs for heating. . . . .	321
14.5. Results analysis. . . . .	322
14.6. Perspectives and conclusions. . . . .	331
14.7. Acknowledgments . . . . .	332
14.8. Bibliography . . . . .	332
<b>Conclusion . . . . .</b>	335
Benoit BECKERS	
<b>APPENDICES . . . . .</b>	339
<b>Appendix 1. Table of Europe's Platforms (Micro- and Minisatellites) for Earth Observations . . . . .</b>	341
